

Longitudinal Arch Supports

Longitudinal arch supports are custom foot orthoses that redistribute the patient's weight to provide comfort and protection of the foot. The materials used to fabricate the arch supports may vary from patient to patient.

Indications:

- Spine/hip/knee/leg/ankle/foot pain, patellar dislocation/maltracking, patellar tendonitis, bunions, hammer toes, metatarsalgia, plantar fasciitis, pes planus/cavus, talipes valgus/varus, shin splints, leg-length discrepancy, and tone/spasticity.
