

## Thoraco-Lumbosacral Corset

The thoraco-lumbosacral corset is an adjustable flexible cloth or elastic garment with shoulder straps worn around the torso and pelvis. This orthosis restricts motion, provides increased intra-abdominal pressure, and provides mild support to the lumbar and thoracic spine.

### Indications:

- Intended to restrict motion in the trunk and control pain secondary to degenerative disc disorders, trauma or postural deformities, generalized osteoporosis, myeloma, metastatic malignancy, and osteoarthritis of the lumbar, lower thoracic, and mid-thoracic areas.
